

JADEN GREEN

AI Automation & Full-Stack Developer — building AI-powered websites and autonomous systems

Phoenix, AZ · jadengreen808@gmail.com · phxgrowth.com · github.com/GreenAiSolution

SUMMARY

Full-stack developer and founder specializing in **AI-powered web platforms and autonomous automation systems** — the kind of build most agencies quote five figures for. I ship fast: live, working software in days, not months. I own the full stack end to end, from React/Next.js front-ends and 3D interfaces to backend APIs, OAuth integrations, AI agent orchestration, and production deployment on Vercel.

If you want proof before we talk, everything below is mine — designed, built, and deployed solo.

WHAT I BUILD FOR CLIENTS

- **High-converting websites & landing pages** — Next.js / React, deploy-ready, accessible, and you own the code.
- **Custom AI automations** — workflows that save hours a week (n8n, webhooks, API integrations).
- **AI "employee" agent systems** — specialist agent crews that handle repetitive work 24/7, living in your Slack.
- **End-to-end launch builds** — from one product URL to a live, profit-first site with tracking and automation wired in.

SELECTED WORK

PHX Growth — Autonomous Media-Buying Platform · Founder & Sole Engineer

An immersive 3D marketing + product platform for the paid-media niche. Solo-built and deployed to production.

- Built with **Next.js 16**, **React 19**, **React Three Fiber**, **Tailwind v4**; deployed on Vercel with automated CI from main.
- Engineered a **16-agent AI fleet** (media buying, creative, billing, sales, ops) orchestrated to run growth workflows autonomously.
- Live **OAuth connectors** (Meta, Google, TikTok, Shopify), lead-capture pipeline (CRM + Slack), and an **n8n automation spine**.
- Real 24/7 "autopilot" heartbeat via scheduled Vercel cron jobs with authenticated endpoints and a persisted flight log.

Pixel Automation System — Client-Deployable AI Revenue Engine · Builder

A packaged, client-deployable automation product: five core workflows over a durable ledger, built to drop into a business and run.

MoneyGun — Autonomous Outbound Revenue Engine · Builder

A self-running outbound engine (daemon + live dashboard) managing an intake → reply → send pipeline with guardrails.

Additional Builds

- **Workplace** — an internal studio-OS (Vite/React/TypeScript) with a multi-room operator cockpit.
- **Choreless** — a chore-outsourcing web app (React + self-contained deployable bundle), shipped to its own repo.

TECHNICAL SKILLS

Front-end	Next.js · React · React Three Fiber · TypeScript · Tailwind CSS · responsive/accessible UI
Back-end	Node.js · REST APIs · OAuth · webhooks · serverless functions · SQLite
AI & Auto	AI agent design & orchestration · n8n · workflow automation · generative creative pipelines
Infra	Vercel · Git/GitHub · CI/CD · cron scheduling · production deployment

EXPERIENCE

Founder & Freelance Developer — GreenAI Solution

Feb 2025 – Present · Phoenix, AZ

Build and ship AI-powered web platforms and automation systems for clients. Own strategy, design, engineering, and deployment end to end.

- Design and build custom **websites** — from concept to live, deploy-ready sites clients own outright.
- Handle **website editing and redesigns** — rebuilding and modernizing existing sites for performance and conversion.
- Wire up **AI automations** that take repetitive work off clients' hands and run without supervision.

EDUCATION

B.A., Real Estate & Project Management

University of Washington
